

Hi, I'm Matthew Schramm. I'm a full-stack developer and project manager currently completing my Honours in Information Systems at UCT.

My work style is rooted in strategic thinking and technical precision. I approach every project with a business-first mindset making sure the solutions I build don't just run well, but actually solve real problems for people and organisations.

I value collaboration and agility. Many of my projects, like Amplify the location-based social marketing platform I'm building with Impact.com demand teamwork, sprint planning, and continuous iteration. I thrive in those environments where diverse ideas come together to create scalable, user-focused digital experiences.

I also believe strongly in process optimisation and innovation. Whether it's redesigning SAP billing workflows to cut inefficiencies by 40% or building a booking platform from scratch, I look for opportunities to simplify complexity and make systems more effective.

Finally, my values extend beyond code. I volunteer as a community tutor in Langa, where I teach digital literacy and beginner coding. For me, technology is about empowerment, and I bring that same perspective into the workplace solutions should be inclusive, impactful, and future-focused.

In short, I'm detail-driven, adaptable, and passionate about turning complex business challenges into elegant digital solutions.
